

## **Demonstration of Triticale for Annual Forage Production**

The purpose of this project is to showcase and demonstrate the differences in yield and maturity of triticale verses other commonly grown annual forage crops in Saskatchewan.

By demonstrating a number of annual forages in side-by-side comparison with triticale, producers will be able to see how these crops will yield in their geographic area under the growing conditions in the year of the trial. This project will increase the comfort level that producers have with seeding and managing annual forages on their farm and will provide more information on the newest forage triticale variety.

*The project was supported by the Agricultural Demonstration of Practices and Technologies (ADOPT) initiative under the Canada-Saskatchewan Growing Forward bi-lateral agreement.*
